### Risk and Reward Profile

Historical data, such as is used in calculating the synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The risk and reward category shown is not guaranteed to remain unchanged and that the categorisation of the Sub-Fund may shift over time. The lowest risk and reward category do not mean a risk-free investment.

Due to the fact that the Sub-Fund invests in a mix of liquid equities and a diversified range of debt securities, the risk indicator is consequently medium to high (5). However, the risk category shown is not guaranteed and may shift over time while the lowest category does not mean “risk free”. Besides, you must be aware that historical data is not a reliable indication of the future risk profile of the Sub-Fund.

Please note the following risks are materially relevant to the Sub-Fund and are not adequately captured by the indicator:

- Liquidity risk: reduced liquidity means there are insufficient buyers or sellers to allow the Sub-Fund to sell or buy investments readily;
- Credit risk: the Sub-Fund is subject to the failure of an issuer to honor payment of coupons or reimbursement of the nominal amount. Such risk is increased when the Sub-Fund invests in high-yield bonds where issuers are deemed risky.
- Operational risk: failures or delays in operational processes may negatively affect the Sub-Fund;
- Market risk: Price trends are determined mainly by financial market trends and by the economic development of the issuers, who are themselves affected by the overall situation of the global economy and by the economic and political conditions prevailing in each country. Market risk ranges from low to medium-high according to assets allocation.
